## SHARED GROUND

A Methodology of Presence, Regulation, and Coherent Care  
Shared Ground is a care methodology developed by Dr. Faust through years of clinical practice and study. It emphasizes presence, perceptual clarity, and responsiveness in support of the nervous system's innate capacity to regulate, adapt, and heal. Rather than functioning as a single technique or protocol, Shared Ground informs how care is delivered—guiding attention, timing, and intervention so that treatment remains precise, individualized, and attuned to the person as a whole.
